STOP 2 OF 3

Understanding the vocabulary

Model? Tool? Connector? App?

Easy: think of a person.

VOCABULARY

Model

Tools

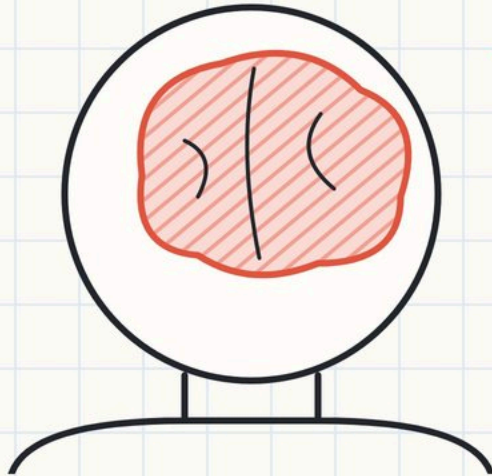

Connectors

App

Model = the brain

the part that knows things and does the thinking

in a person

what you know, and how you reason

=

in AI

The model has read a huge amount and can reason, write and plan. Everything else is built around it.

Models you've heard of

different brains, from different companies

GPT-6

OpenAI

Claude Opus

Anthropic

Gemini 3.1 pro

Google

VOCABULARY

Model

Tools

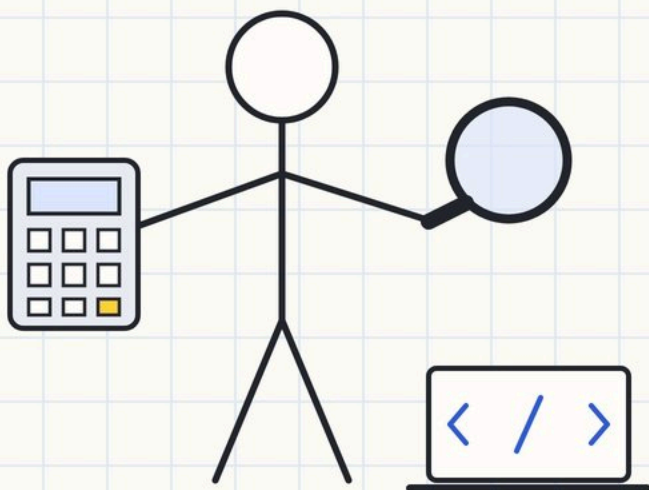

Connectors

App

Tools = the gadgets it picks up

for exact answers and real actions, not just thinking

in a person

a calculator, a magnifying glass, a laptop

=

in AI

Tools are things the model can use when thinking alone isn't enough: exact maths, fresh facts, running code.

Tools it can pick up

for when thinking alone isn't enough

Calculator

exact maths

Web search

today's facts

IDE

writes & runs code

VOCABULARY

Model

Tools

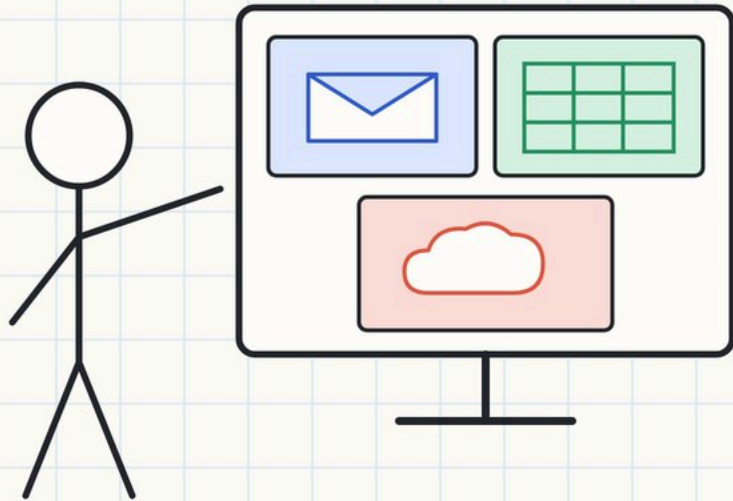

Connectors

App

Connectors = your work apps

the same apps you use every day, now the AI can use them too

in a person

you open Outlook, Excel and Salesforce to get work done

in AI

Connectors let the AI open the same apps you use, so it can read and act on your real data.

Connectors to your systems

your real data, with your permission

Outlook

mail & calendar

Excel

sheets & numbers

Salesforce

customers & deals

you choose which apps it can use

VOCABULARY

Model

Tools

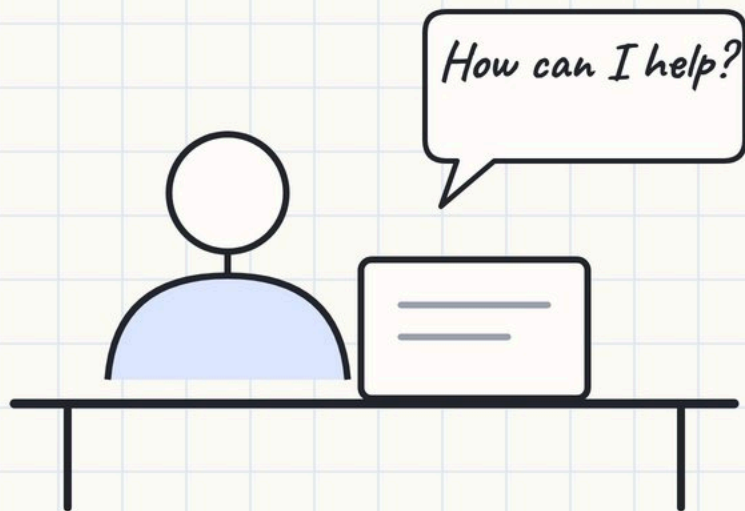

Connectors

App

App = the colleague you talk to

what you actually open and chat with

in a person

brain + gadgets + keys, sitting at a desk

=

in AI

The app wraps a model, its tools and its connectors into one window you can chat with.

Apps you can open today

a model + tools + connectors, in one window

ChatGPT

by OpenAI

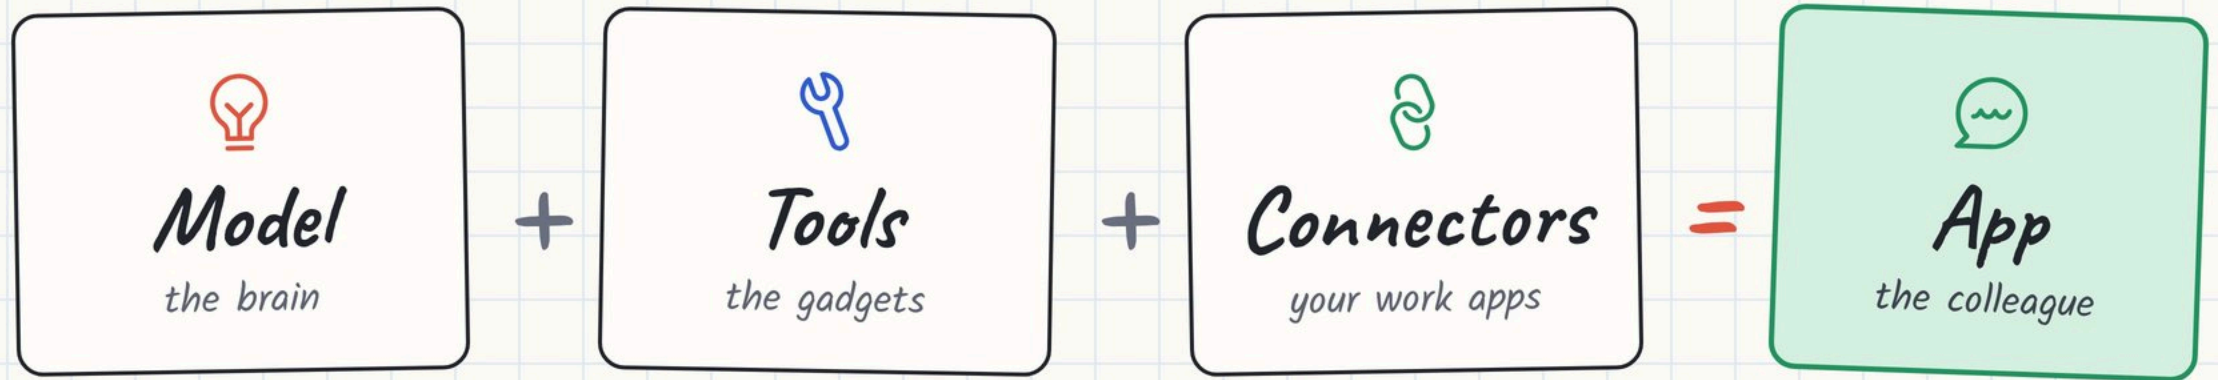

Claude

by Anthropic

VOCABULARY

Put it together

the four words are just parts of one colleague

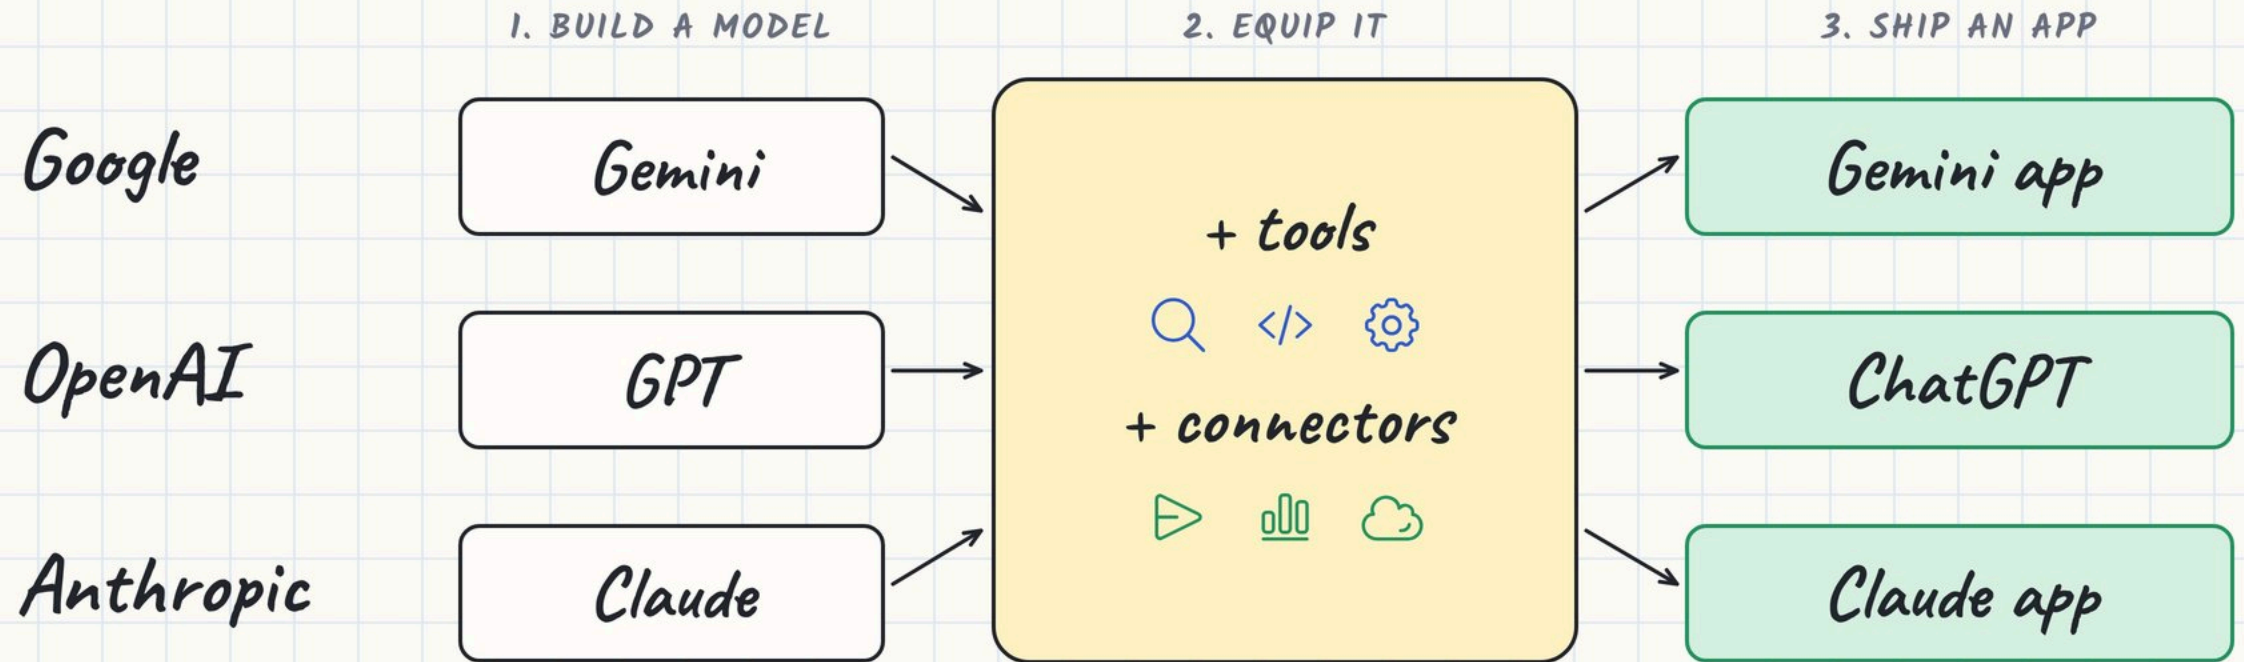

Same brain, different gadgets and apps = very different results.

VOCABULARY

How companies make apps

train a brain, equip it, put it at the front desk

like a firm that trains an expert, equips them, then seats them at the front desk

VOCABULARY

Reading a model's name

every name is built from the same four parts

as written	family who made it	version which generation	size / specialization what it's tuned for	mode quick or deep
GPT 6 Astra Instant	GPT	6	Astra	Instant
Gemini 3.8 Flash	Gemini	3.8	Flash	default
Claude Opus 5.5 High	Claude	5.5	Opus	High

each company writes them in a different order; the four parts are always there

STOP 3 OF 3

Use cases

Enough theory. Let's open a real app.

Real tasks. Done live.

beginner-friendly: writing, documents, sheets and slides

USE CASES

Four things you do every week

we'll do each one live, in a real app

3a Writing

emails · meeting minutes · vendor letters · site notes into reports

3b Technical know-how

legal documents · civil engineering concepts · new laws & rules

3c Excel

fix & build formulas · plugins · live dashboards · reports

3d Presentations

from rough notes to a clear, on-brand deck

for each: a live example → which tool, how much effort, what you need first

The email in your inbox

a client wants the milestone pulled forward by almost a month

From: Amit Mehra, Project Controls Manager, BepsiCo · **To:** Rohanbuilders Project Team

...the Mechanical Completion milestone for the Process Building is presently scheduled for **15 February 2027**.

BepsiCo requests Rohanbuilders to evaluate advancing it to **20 January 2027**.

Please submit an acceleration proposal covering **8 items**: revised Level 3 schedule, critical-path impact, extra resources, long-lead deliveries, vendor dependencies, risks, commercial implications...

Attachment: **BepsiCo_Milestone_Acceleration_Requirement_Rev01.pdf**

Preliminary feasibility by **02 October 2026**; detailed plan by **06 October 2026**.

Kindly **acknowledge receipt** and **confirm your proposed submission dates**.

What it asks now

1. Acknowledge receipt
2. Confirm 02 Oct and 06 Oct

...and later

the 8-item acceleration proposal

catch: the attachment was never actually attached!

Two prompts, same email

we'll run both in every tool

BAD PROMPT

"reply to this email"

no role, no facts, no limits: the AI has to guess what you want

GOOD PROMPT

who

You're the project manager at Rohan Builders.

task

Draft a reply to Amit Mehra at BepsiCo.

must

Acknowledge receipt. Confirm the feasibility assessment by 02 Oct 2026 and the detailed plan by 06 Oct 2026.

check

The attachment they mention didn't come through: ask them to resend it.

don't

Don't commit to 20 Jan 2027 yet.

style

Professional and cooperative, under 150 words.

Three ways to do it

from zero setup to fully connected

1 

Copy & paste into a chatbot

Paste the email and your prompt into ChatGPT, Claude or Copilot chat, then copy the reply back.

- + works anywhere, no setup
- client data leaves Outlook: check the policy

2 

Copilot inside Outlook

Open the email, ask Copilot to draft a reply with your prompt, edit it right there.

- + no copy-paste, stays in the thread
- needs a Copilot licence

3 

Claude + Outlook connector

Ask Claude to find Amit's email and draft a reply. It searches your mailbox and saves the draft.

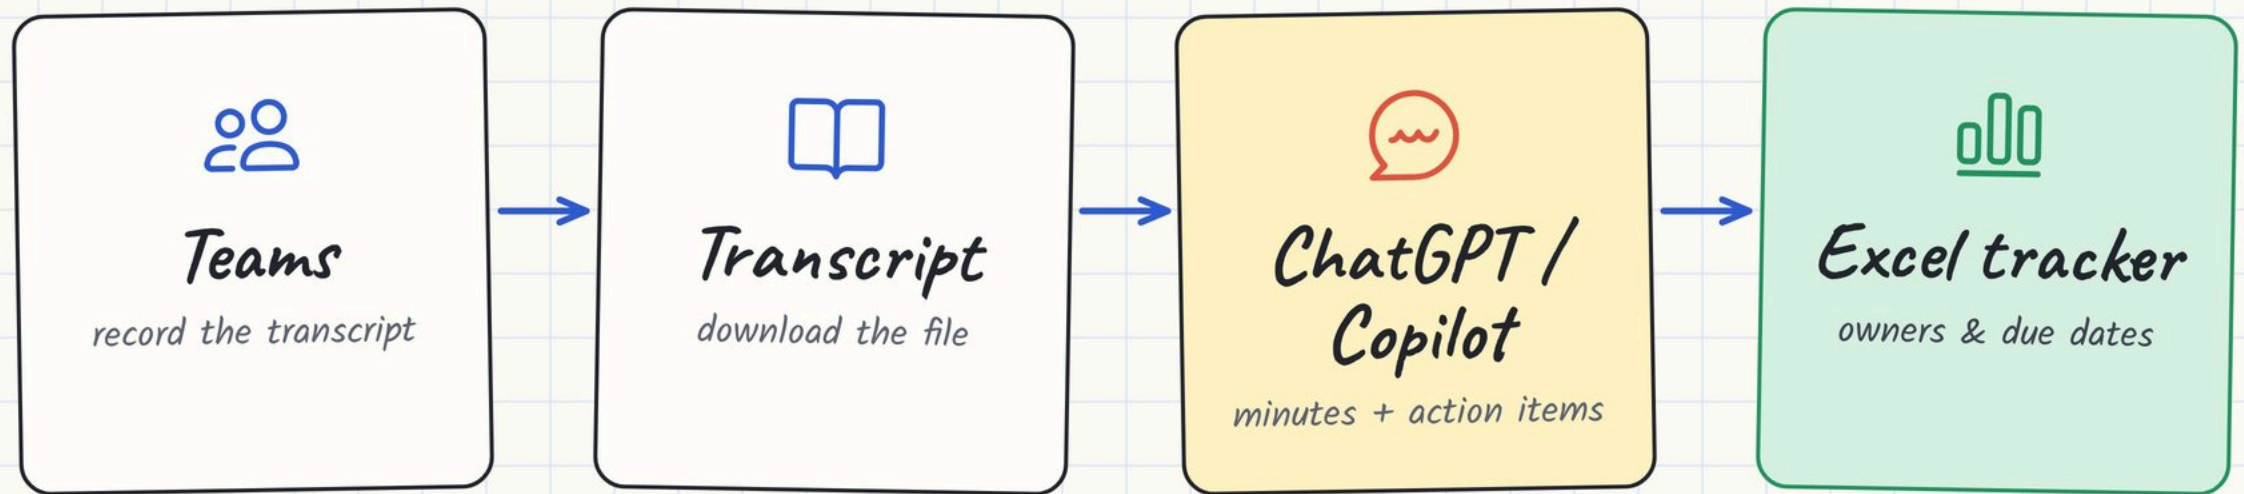

- + can pull in other emails, calendar, files
- connector must be set up first

What actually happened

	BAD PROMPT		GOOD PROMPT	
	Copilot	ChatGPT	ChatGPT	Copilot
flags missing attachment	✗ assumed received	✗ says it arrived	✓ asks to resend	✓ asks to resend
doesn't promise 20 Jan	✗ sounds like a yes	✓ clear disclaimer	✓ no commitment	✓ softer, no promise
signs as the right person	✗ wrong name & title	~ [Name] left blank	✓ correct	✓ correct
names what we'll review	~ generic	~ vague	✓ specific	✓ specific
length & tone	~ long, reactive	~ long, legalistic	✓ concise, decisive	✓ concise
checks passed	0/5	1/5	5/5 ★	5/5 ★

From meeting to tracker

nobody takes notes; nothing gets lost

two habits make it work: give it context, and ask for the tracker

Step 1: capture it in Teams

three clicks during the meeting, three after

During the meeting

- 1 Click **More (...)** in the meeting bar
- 2 Choose **Record and transcribe**
- 3 Click **Start transcription** and tell everyone

After the meeting

- 4 Open the meeting's **chat** in Teams
- 5 Go to **Recap** → **Transcript**
- 6 **Download** it as a .docx

greyed out? transcription may be switched off for your account: ask IT

Give it the context first

a transcript knows the words, not who's who or what matters

IN THE CHAT, BEFORE THE TRANSCRIPT

- meeting** Weekly progress review, BepsiCo expansion, 29 Sep 2026
- who's who** Arjun: PM · Priya: planning · Amit Mehra: BepsiCo controls
- our terms** MC = Mechanical Completion · L3 = Level 3 schedule
- focus** The 20 Jan acceleration request
- task** Write the minutes: decisions, open issues, action items with owner and due date. Mark anything unclear as [check].

+ **attach:** transcript.docx

Why it helps

*names spelled right, owners
assigned right*

jargon understood, not guessed

gaps flagged, not invented

Turn actions into a tracker

one more line in the same chat

"Put all action items in an Excel tracker: #, action, owner, due date, status. One row each. Give me a file to download."

#	Action	Owner	Due	Status
1	Ask BepsiCo to resend the Rev01 note	Arjun	30 Sep	Done
2	Confirm long-lead delivery dates	Procurement	01 Oct	Open
3	Send preliminary feasibility	Arjun	02 Oct	Open
4	Revised L3 schedule for 20 Jan MC	Priya	06 Oct	Open

paste it into your team tracker, or share the file as is

Set up the context once

set once

ChatGPT Projects

New project → add the files → add instructions ("always write minutes in this format") → start each week's chat inside it

Copilot Notebooks

New notebook → add the files and pages as references → ask Copilot inside the notebook

One chat per conversation

✗ a new chat every time

3 separate chats, no memory

"So there's this steel vendor, and they said..."

"Background: we asked them for 60%, I think..."

"Remind me what we agreed with them?"

re-explain · details drift · replies contradict

✓ one chat per vendor

Shree Steel – rebar delivery

01 Oct · their delay → our reply

04 Oct · their counter-offer → our reply

08 Oct · "where do we stand?" → recap

explain once · one position · full history

Three things to remember

1

*Context > how
you write*

2

*Many routes,
same result*

3

*It always answers,
so define "good"*

Read a contract like an expert

TRAINING ONLY

Agreement for Civil, Structural & Building Works

16 pages · 21 clauses · 4 annexures

INR 148.6 Cr lump sum

MC 15 Feb 2027 · LDs 0.5% a week

1 Break it down

2 Find the clauses that bite

3 Understand the engineering

4 Check what's changed

Where does the answer come from?

It already knows

training · general know-how

"What is a pile integrity test?"

but frozen at its training date

Web search

tool · what's new and public

"Any new MIDC or Pune rules since Feb 2026?"

gives links: open them

Your documents

custom database · private

"What does our clause 5.4 say?"

file, Project or connector

Match the effort to the job

a quick question doesn't need the biggest brain

Quick

fast model, low effort

"What does
FM2 mean?"

Everyday

the default model

"clause 7 in plain Hindi"

Deep

smartest model, high effort

"Review all 21 clauses
against Amit's email"

faster · cheaper · lighter

slower · deeper · more thorough

Break it down

Prompt

"Sort this contract into money, time, change, quality and risk. Under each, list the clauses and what they mean in one line."

Money

Time

Change

Quality

Risk &
exit

Find the clauses that bite

Prompt "You're our contracts manager. Which 5 clauses put us most at risk? Rank them and explain each in one line."

5.4 – 5.5

Accelerate before written sign-off: our cost, and the new date carries LDs

HIGH

6.2

Miss the 14-day notice and we lose the time extension and the money

HIGH

7.4, 14.3

LDs aren't the ceiling: loss of production can be claimed on top

HIGH

15.3

New labour laws or wage rises after Feb 2026 are our cost

MEDIUM

19.2

Their MD picks the arbitrator. Ask for a neutral appointment

MEDIUM

One concept, four levels

Prompt "Explain the pile load test in Annexure B1.3 at four levels: basic, CXO, civil engineer and planning engineer."

Basic

Before we build on 420 piles, we load a few test piles far past their working load to prove the ground can carry the building.

CXO

A hold point: no production piling until the tests pass. A failure means redesign, and MI (31 Jul) slips along with everything after it.

Civil Engineer

2 piles per size tested to 2.5 × SWL (150 t, 230 t) per IS 2911 Part 4. Then routine tests on 0.5% and PIT on every pile.

Planning Engineer

Cast, cure, load and report: about 5 to 6 weeks. Put HP-1 on the critical path, ahead of production piling.

Check what's changed

Web search on

"Search for new or amended laws, by-laws and codes since 10 Feb 2026 that affect building work at MIDC Chakan, Pune. Give the source and date, and say whether each falls under clause 15.1 or 15.3."

Clause 15.1 · we can claim

new by-laws, permit conditions, codes made mandatory by law

Clause 15.3 · our risk

labour, wage, social security and safety law changes

Open every link. Confirm on the official site (Gazette, MIDC, BIS) before you rely on it.

Prompts worth keeping

Four levels

"Explain [concept] at four levels: basic, CXO, civil engineer and planning engineer."

Map it

"Break this document into money, time, change, quality and risk, with clause numbers."

Red-team it

"You're the client's lawyer. Which clauses would you use against us, and how?"

What's new?

"Search for changes since [date] that affect [topic]. Give sources and dates."

Three real sheets from site

XLS 15 Sept 2026

Plan vs Achievement

34 tabs, 13 of them hidden

136,043 formulas

4,194 broken cells

XLS 24 Sept 2026

Daily Progress Report

254 work items

1,536 people on site

86 hindrances logged

XLS 25 Sept 2026

Contractor Deployment

123 contractors

1,371 workers present

.xls an old file format

How much can you hand over?

the same ladder as section 1, now inside a spreadsheet

Each step up, the AI does more on its own, so you check its work more carefully.

1 Explain

"What does this tab calculate?"

2 Fix

"Why is this cell #REF!?"

3 Build

"Add a column that flags overruns"

4 Analyse

"Which buildings are slipping, and why?"

5 Run it

"Every morning, update the tracker and mail me"

Where does the AI sit?

three ways to bring AI to a spreadsheet

Chat app

ChatGPT · Claude app

"Summarise this DPR for the client"

works on a copy you upload

Inside Excel

Copilot · Claude for Excel

"Fix the #REF! errors in this tab"

edits the live file: save a copy first

Connected

OneDrive · SharePoint

"Pull today's DPR and update the dashboard"

reads the latest file every time

Fix the formulas

Prompt

"Find every error in this workbook. Group them by cause, fix the source formula rather than each cell, and list what you changed."

4,194 broken cells

#REF!

3,350 a column or tab was deleted

#N/A

465 a lookup couldn't find a match

#DIV/0!

369 divided by an empty cell**BEFORE** · shows #DIV/0! when the plan is blank

```
=IF(X16<0,0,X16/016)
```

AFTER · same answer, no error

```
=IF(016=0,0,MAX(X16,0)/016)
```

A #REF! can't be guessed. A good AI asks which column it should point to. If it doesn't ask, you should.

Build formulas in plain English

Prompt "In the DPR, add a column that flags any item where the work done is more than the total quantity."

IT WRITES

```
=IF(G10>E10, "CHECK", "")
```

and explains it: **G** is work done to date, **E** is total quantity.

6 rows caught out of 254

Item	Total	Done	Flag
Final line trench raft PCC	380	760	CHECK
220/10 KV Substation	800	918	CHECK
Walls	2,162	2,195	CHECK
Pedestal 1st Lift	62	64	CHECK

From daily files to a live dashboard

Prompt

"Every morning these three files land in SharePoint. Combine them into one dashboard: manpower, progress against plan and open hindrances. Refresh it daily."

Reports that write themselves

Prompt

"From today's DPR, write the weekly client report: progress against plan, manpower, hindrances with dates, and rain hours lost. One page, in our format."

Weekly Report · JSW Bidkin

 Progress vs plan	<i>by building: what moved, what slipped</i>
 Manpower & machinery	<i>1,536 people · 127 machines</i>
 Hindrances	<i>13 open · RMC supply the top cause</i>
 Rain	<i>hours of work lost this month</i>

Dated hindrances are your evidence

*Remember the 14-day notice in the contract?
A dated hindrance list is how you meet it.*

Three ways to make a deck with AI

Inside PowerPoint

Copilot · ChatGPT

edits a real .pptx in
your template

best when it must
be PowerPoint

Chat to file

ChatGPT · Claude · Gemini

writes a .pptx from a prompt
or a file

complete, but plain design

HTML decks

Claude · this deck

AI writes the slides as a
web page

most control, most flexible

Why AI is better at HTML

same model, same prompt, very different results

X PPTX: built blind

AI writes code, which writes the file

it can't see the slide it made

text overflows, fonts swap, layouts drift

you fix it by hand in PowerPoint

✓ HTML: its native language

the web is what it has read most

it writes the page itself

it can render it, look, and fix it

you fix it by asking

What HTML can do that PPTX can't

Live data

the JSW dashboard, refreshed every morning

Interactive

click, filter, drill into a building

Motion

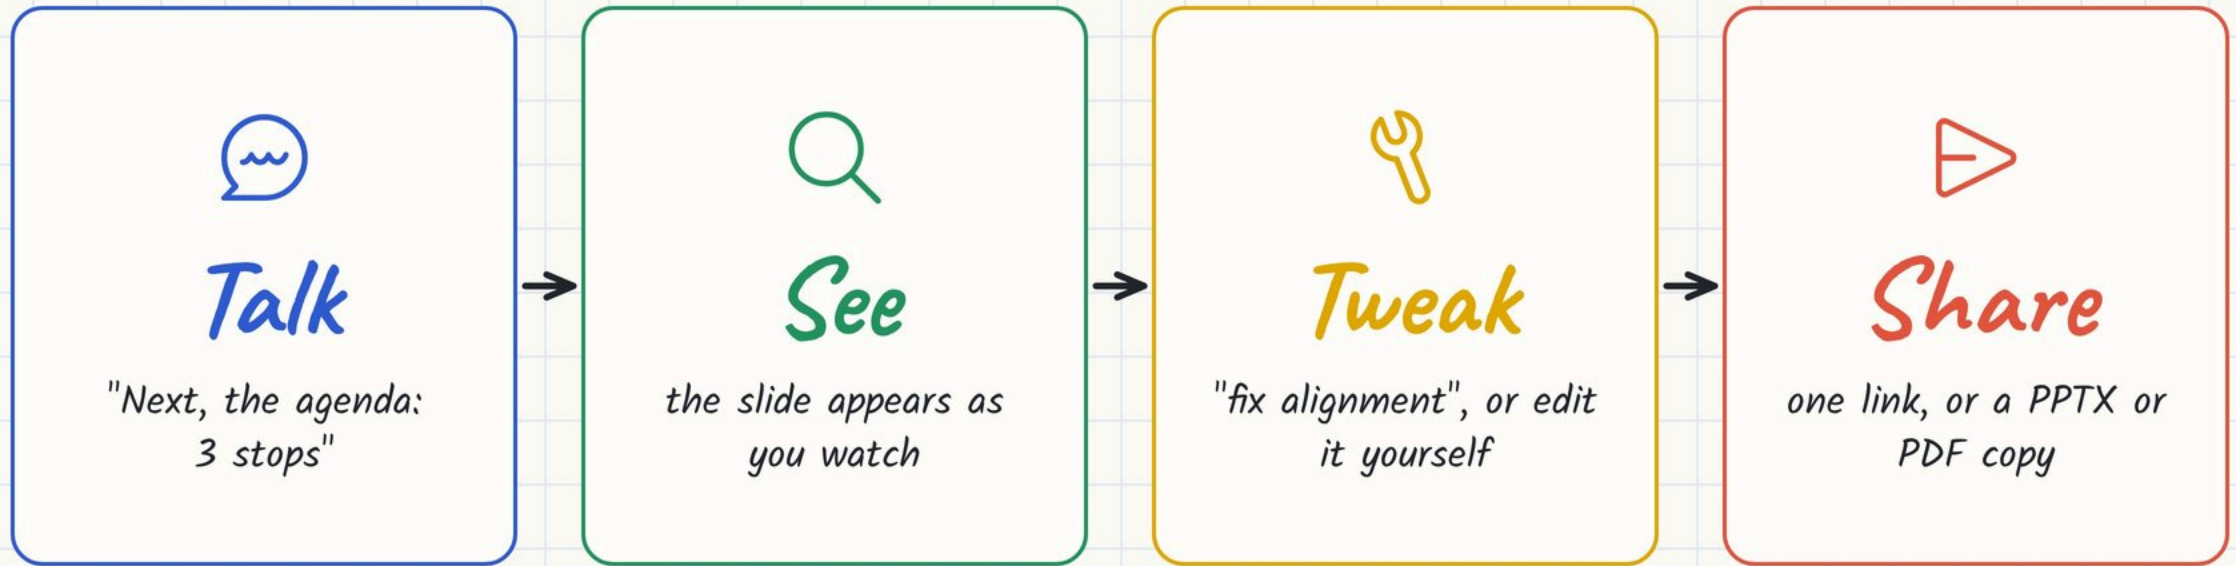

hand-skipped animations, like our opening reel

One link

opens on any phone; everyone sees the latest version

This deck is the demo

60 slides

built **slide by slide** in conversation

170+ edits by hand

When PPTX still wins

Client template

*their master slides
are mandatory*

Others will edit

colleagues work in PowerPoint

Attachments

email, offline, no link allowed

Build in HTML. Export a PPTX when someone else needs to edit it.

A deck prompt that works

I'm the planning engineer for Rohan Builders on the JSW Motors plant at Bidkin. Attached is our DPR for 24 Sept 2026. Build a 6-slide HTML deck for JSW's monthly review with their project heads.

Slide 1 – Where we stand: overall % complete vs plan, with a one-line verdict as the title.

Slide 2 – Progress by building: bar chart of % complete for each building; flag the 3 furthest behind.

Slide 3 – Manpower & machinery: 1,536 people by trade and the machines deployed; note any gaps.

Slide 4 – Hindrances: open items with start date, days open and impact; call out RMC supply.

Slide 5 – Next month's plan: targets per building, and the drawings and work fronts we need from JSW.

Slide 6 – Decisions needed: the 3 decisions we need from JSW, each with an owner and a date.

Rules: use only numbers from the DPR and name the tab they came from. Each slide title states its message. Charts, not tables. Navy and yellow, our logo on slide 1. Speaker notes on every slide. If a figure looks wrong, flag it; don't fix it. All Animations to be in HTML itself

The same deck, as a PowerPoint

I'm the planning engineer for Rohan Builders on the JSW Motors plant at Bidkin. Attached are our DPR for 24 Sept 2026 and our company PowerPoint template. Build a 6-slide .pptx for JSW's monthly review with their project heads; they will edit it after the meeting.

Slide 1 – Where we stand: overall % complete vs plan, with a one-line verdict as the title.

Slide 2 – Progress by building: bar chart of % complete for each building; flag the 3 furthest behind.

Slide 3 – Manpower & machinery: 1,536 people by trade and the machines deployed; note any gaps.

Slide 4 – Hindrances: open items with start date, days open and impact; call out RMC supply.

Slide 5 – Next month's plan: targets per building, and the drawings and work fronts we need from JSW.

Slide 6 – Decisions needed: the 3 decisions we need from JSW, each with an owner and a date.

Rules: use the template's master layouts, fonts and colours; don't invent a design. Charts must be native, editable PowerPoint charts, not pictures. All text in real text boxes, no text over 6 lines per box. Use only numbers from the DPR and name the tab they came from.

Speaker notes on every slide. If a figure looks wrong, flag it; don't fix it. Before you finish, check every slide for text that overflows its box.
